# Insert Data (One) into the Patient Collection

We have a database named Hospital. Inside the Hospital database, there is a collection named Patient. Firstly, no document in the Patient collection.

Before inserting data:

MongoDB shell command:

db.Patient.insertOne({name:"Sabbir", age: 23, address: "Dinajpur", phone: 01729892494})

After inserting data:

Hospital.Patient
